## **GCSE AQA Chemistry: Topic 1**

**Atomic structure and the periodic table.**

### **Exam Questions/Mock Exam Questions**

**Questions For Foundation, Higher, and Triple Science ([scroll down for questions for higher and triple science only](#)):**

(It would still be recommended to answer the foundation tier questions for triple science and higher tier to ensure you have good understanding).

**Q1. Atoms contain sub-atomic particles.**

(a) Name the three sub-atomic particles found in an atom.

---

---

---

[3]

(b) State the charge of a proton.

---

[1]

[Total: 4 marks]

**Q2. The nucleus of an atom contains protons and neutrons.**

(a) What is the relative mass of a proton?

---

[1]

(b) What is the relative charge of a neutron?

---

[1]

[Total: 2 marks]

**Q3. The periodic table is used to organise elements.**

(a) How are elements arranged in the modern periodic table?

---

---

[2]

(b) What is the name given to the vertical columns in the periodic table?

---

[1]

[Total: 3 marks]

**Q4. Electronic structure describes how electrons are arranged.**

(a) State the maximum number of electrons in the first shell.

---

[1]

(b) Write the electronic structure of oxygen (atomic number 8).

---

[1]

[Total: 2 marks]

**Q5. Isotopes are atoms of the same element with different numbers of neutrons.**

(a) State one similarity between isotopes of the same element.

---

[1]

(b) State one difference between isotopes of the same element.

---

[1]

[Total: 2 marks]

**Q6. The atomic number and mass number are important in describing atoms.**

(a) Define the atomic number.

---

[1]

(b) Define the mass number.

---

[1]

[Total: 2 marks]

**Q7. The periodic table was developed over time.**

(a) State one way in which Mendeleev improved earlier versions of the periodic table.

---

---

[2]

(b) Why was Mendeleev's periodic table accepted by other scientists?

---

---

[2]

[Total: 4 marks]

**Q8. Group 1 metals are called the alkali metals.**

(a) Describe the trend in reactivity of Group 1 metals as you go down the group.

---

[1]

(b) Give one observation when sodium reacts with water.

---

[1]

[Total: 2 marks]

**Q9. Group 7 elements are called the halogens.**

(a) Describe the trend in reactivity of Group 7 elements as you go down the group.

---

[1]

(b) Explain why fluorine is more reactive than chlorine.

---

---

[2]

[Total: 3 marks]

**Q10. Transition metals have different properties to Group 1 metals.**

(a) State one property of transition metals.

---

[1]

(b) Give one difference in reactivity between transition metals and Group 1 metals.

---

---

[2]

[Total: 3 marks]

**Q11. Atomic structure can be represented using nuclear symbols.**

The nuclear symbol for sodium is:

(a) How many protons does sodium have?

---

[1]

(b) How many neutrons does sodium have?

---

[1]

[Total: 2 marks]

**Q12. The noble gases are found in Group 0.**

(a) Why are noble gases unreactive?

---

---

[2]

(b) State one use of a noble gas.

---

[1]

[Total: 3 marks]

**Q13. Early models of the atom have been replaced.**

(a) Name the model of the atom proposed by J. J. Thomson.

---

[1]

(b) Explain how Rutherford's experiment changed the model of the atom.

---

---

[2]

[Total: 3 marks]

**Q14. Metals and non-metals are found on different sides of the periodic table.**

(a) Give one property of metals.

---

[1]

(b) Give one property of non-metals.

---

[1]

[Total: 2 marks]

**Q15. Elements in the same group of the periodic table have similar properties.**

(a) Explain why elements in the same group have similar chemical properties.

---

---

[2]

(b) Give one example of two elements in the same group that have similar properties.

---

[1]

[Total: 3 marks]

## Higher Tier

### Q16. Atoms contain sub-atomic particles.

(a) State the relative mass and relative charge of a proton.

---

---

[2]

(b) Compare the properties of protons and neutrons.

---

---

[2]

[Total: 4 marks]

### Q17. Isotopes are important in chemistry.

(a) Define the term isotope.

---

---

[2]

(b) Chlorine has two isotopes, chlorine-35 and chlorine-37. The relative abundances are 75% and 25%.

Calculate the relative atomic mass ( $A_r$ ) of chlorine.

---

---

---

[3]

[Total: 5 marks]

**Q18. The development of the atomic model.**

(a) Describe the main features of the plum pudding model of the atom.

---

---

[2]

(b) Explain how Rutherford's experiment led to the nuclear model of the atom.

---

---

---

[3]

[Total: 5 marks]

**Q19. Electronic structure is important for explaining the periodic table.**

(a) Write the electronic configuration of an atom of phosphorus (atomic number 15).

---

[1]

(b) Explain how the electronic configuration of phosphorus shows it is in Group 5 and Period 3.

---

---

[2]

[Total: 3 marks]

**Q20. The periodic table was developed by Mendeleev.**

(a) Explain how Mendeleev arranged the elements in his periodic table.

---

---

[2]

(b) Give one reason why Mendeleev's periodic table was accepted by other scientists.

---

---

[2]

[Total: 4 marks]

**Q21. Group 1 metals are reactive.**

(a) Describe the trend in reactivity as you go down Group 1.

---

---

[2]

(b) Explain why this trend occurs in terms of electronic structure.

---

---

[2]

[Total: 4 marks]

**Q22. The halogens are found in Group 7.**

(a) State the trend in boiling point down Group 7.

---

[1]

(b) Explain the trend in reactivity of the halogens.

---

---

[2]

(c) Write a balanced symbol equation for the reaction of chlorine with potassium bromide solution.

---

---

[2]

[Total: 5 marks]

**Q23. The transition metals are found in the centre of the periodic table.**

(a) State two properties of transition metals that are different from Group 1 metals.

---

---

[2]

(b) Give one industrial use of transition metal compounds.

---

[1]

[Total: 3 marks]

**Q24. Relative atomic mass can be calculated using isotopic data.**

A sample of magnesium contains 79% magnesium-24, 10% magnesium-25, and 11% magnesium-26.

(a) Calculate the relative atomic mass ( $A_r$ ) of magnesium.

---

---

---

[3]

(b) Suggest why the relative atomic mass is not a whole number.

---

[1]

[Total: 4 marks]

**Q25. The noble gases are found in Group 0.**

(a) Explain why noble gases are chemically unreactive.

---

---

[2]

(b) State and explain the trend in boiling points of the noble gases.

---

---

[2]

[Total: 4 marks]

**Q26. Atomic structure can be represented using nuclear symbols.**

An atom of aluminium has the symbol  $^{27}_{13}\text{Al}$ .

(a) How many protons, neutrons and electrons are in this atom?

---

---

[2]

(b) An aluminium ion has the formula  $\text{Al}^{3+}$ . Explain why this ion has fewer electrons than the atom.

---

---

[2]

[Total: 4 marks]

**Q27. The discovery of the neutron improved the atomic model.**

(a) State the name of the scientist who discovered the neutron.

---

[1]

(b) Explain why the discovery of the neutron was important for understanding isotopes.

---

---

[2]

[Total: 3 marks]

**Q28. Group 7 displacement reactions.**

A student adds chlorine water to potassium iodide solution.

(a) Write the ionic equation for this reaction.

---

---

[2]

(b) Explain why this reaction occurs.

---

---

[2]

[Total: 4 marks]

**Q29. The periodic table shows trends in elements.**

(a) Explain why elements in the same group have similar chemical properties.

---

---

[2]

(b) Compare the reactivity of Group 1 and Group 7 elements.

---

---

---

[3]

[Total: 5 marks]

**Q30. Electronic configurations.**

(a) Write the electronic configuration of calcium (atomic number 20).

---

[1]

(b) Explain how the electronic structure of calcium shows it will form an ion with a 2+ charge.

---

---

[2]

[Total: 3 marks]

**Q31. Development of the periodic table.**

(a) Describe two problems with early periodic tables before Mendeleev.

---

---

[2]

(b) Explain how Mendeleev overcame these problems.

---

---

[2]

[Total: 4 marks]

**Q32. The structure of the atom.**

(a) Describe the size of the nucleus compared to the size of the atom.

---

[1]

(b) Explain why most of the alpha particles passed straight through the foil in Rutherford's experiment.

---

---

[2]

(c) Explain why a few alpha particles were deflected back.

---

---

[2]

[Total: 5 marks]

**Q33. Group 1 and transition metals.**

(a) State two differences in physical properties between Group 1 metals and transition metals.

---

---

[2]

(b) Transition metals form coloured compounds. Give one example of a coloured transition metal compound and state its colour.

---

[1]

[Total: 3 marks]

**Q34. Atomic number and relative atomic mass.**

(a) Explain why elements are arranged in order of atomic number in the modern periodic table.

---

---

[2]

(b) Why did some elements appear in the wrong order when arranged by atomic mass alone?

---

---

[2]

[Total: 4 marks]

**Q35. Group 0 elements.**

(a) Explain why helium is used in balloons rather than hydrogen.

---

---

[2]

(b) Argon is used in filament lamps. Explain why argon is suitable for this use.

---

---

[2]

[Total: 4 marks]

**Triple Science Tier**

**Q36. The structure of the atom.**

(a) Compare the relative mass and charge of protons, neutrons, and electrons.

---

---

---

[3]

(b) Explain why atoms are electrically neutral.

---

---

[2]

[Total: 5 marks]

**Q37. The development of atomic theory.**

(a) Describe how Niels Bohr adapted Rutherford's nuclear model.

---

---

[2]

(b) Explain why new evidence from scattering experiments was important in developing atomic models.

---

---

---

[3]

[Total: 5 marks]

**Q38. Isotopic calculations.**

A sample of chlorine contains 75% chlorine-35 and 25% chlorine-37.

(a) Calculate the relative atomic mass ( $A_r$ ) of chlorine.

---

---

---

[3]

(b) Explain why the  $A_r$  of chlorine is not a whole number.

---

---

[2]

[Total: 5 marks]

**Q39. Electronic configurations.**

(a) Write the electronic configuration of calcium (atomic number 20).

---

[1]

(b) Explain why calcium forms an ion with a 2+ charge.

---

---

[2]

[Total: 3 marks]

**Q40. Periodic table trends.**

(a) Explain why elements in the same group of the periodic table have similar chemical properties.

---

---

[2]

(b) Compare the reactivity of Group 1 and Group 7 elements, giving reasons.

---

---

---

[3]

[Total: 5 marks]

**Q41. Transition metals.**

(a) State two differences in physical properties between transition metals and Group 1 metals.

---

---

[2]

(b) Give two reasons why transition metals are useful as catalysts.

---

---

[2]

[Total: 4 marks]

**Q42. Transition metal compounds.**

(a) Copper(II) sulfate is a transition metal compound. State its colour.

---

[1]

(b) Explain why transition metals form compounds with different charges.

---

---

[2]

(c) Give one industrial use of transition metal compounds.

---

[1]

[Total: 4 marks]

**Q43. Group 7 displacement reactions.**

(a) Write the balanced chemical equation for the reaction of chlorine with potassium bromide solution.

---

---

[2]

(b) Explain why this reaction is a displacement reaction.

---

---

[2]

[Total: 4 marks]

**Q44. Group 0 elements.**

(a) Describe and explain the trend in boiling points of the noble gases.

---

---

[2]

(b) Argon is used in filament lamps. Explain why it is suitable for this use.

---

---

[2]

[Total: 4 marks]

**Q45. Atomic models.**

(a) State one problem with the plum pudding model.

---

[1]

(b) Explain how the results of Rutherford's alpha particle scattering experiment disproved the plum pudding model.

---

---

---

[3]

[Total: 4 marks]

**Q46. Nuclear symbols.**

An atom of magnesium has the symbol  $^{25}_{12}\text{Mg}$ .

(a) How many protons are in this atom?

---

[1]

(b) How many neutrons are in this atom?

---

[1]

(c) How many electrons are in a  $\text{Mg}^{2+}$  ion?

---

[1]

[Total: 3 marks]

**Q47. Group 1 trends.**

(a) Explain why lithium reacts less vigorously with water than potassium.

---

---

[2]

(b) Give two observations you would see when potassium reacts with water.

---

---

[2]

[Total: 4 marks]

**Q48. Predicting reactions.**

(a) Predict the products when fluorine reacts with sodium bromide solution.

---

---

[2]

(b) Write a balanced chemical equation for this reaction.

---

---

[2]

[Total: 4 marks]

**Q49. Properties of metals and non-metals.**

(a) Explain why metals can conduct electricity.

---

---

[2]

(b) Explain why non-metals do not conduct electricity.

---

---

[2]

[Total: 4 marks]

**Q50. The history of the periodic table**

(a) Describe two problems with early periodic tables before Mendeleev.

---

---

[2]

(b) Explain how Mendeleev's periodic table overcame these problems.

---

---

[2]

(c) Explain why the discovery of isotopes provided support for Mendeleev's ideas.

---

---

[2]

[Total: 6 marks]
