

## GCSE AQA Chemistry: Topic 3

### AQA Chemistry Topic 3: Quantitative Chemistry

#### Mark Scheme

#### Q1. Relative atomic mass

(a) Define Ar:

- The weighted average mass of one atom of an element compared with 1/12 the mass of a carbon-12 atom (1)
- Unitless / no units (1)

(b) Ar of oxygen = **16** (1)

**Total: 3 marks**

---

#### Q2. Sodium

(a) Ar = 23 means:

- Average mass of one atom of sodium relative to 1/12 the mass of carbon-12 (1)
- Number is relative, not in grams (1)

(b) Number of protons in sodium = **11** (1)

**Total: 3 marks**

---

#### Q3. Carbon dioxide

(a) Formula: **CO<sub>2</sub>** (1)

(b) Relative formula mass (Mr) =  $12 + (16 \times 2) = 44$  (1)

**Total: 3 marks**

---

#### Q4. Calculating Mr

(a) H<sub>2</sub>O:  $1 \times 2 + 16 = 18$  (1)

(b) NaOH:  $23 + 16 + 1 = 40$  (1)

**Total: 2 marks**

---

### Q5. Conservation of mass

(a) Law: Mass is neither created nor destroyed in a chemical reaction (1)

- Total mass of reactants = total mass of products (1)

(b) Mass  $\text{CO}_2 = 12 + 32 = 44$  g (1)

**Total: 3 marks**

---

### Q6. Apparent mass changes

(a) Mass increases: magnesium reacts with oxygen from air  $\rightarrow$  mass of product (magnesium oxide) includes oxygen (1)

(b) Mass decreases: gas (e.g.,  $\text{CO}_2$  from heating metal carbonate) escapes  $\rightarrow$  less mass remains (1)

**Total: 4 marks**

---

### Q7. Moles

(a) Number of moles = mass  $\div$  Mr (1)

(b) Moles NaOH =  $20 \div 40 = 0.5$  mol (1)

**Total: 3 marks**

---

### Q8. Balanced equations

(a) Big number in front = **mole ratio of substances** (1)

(b) Balanced:  $2\text{H}_2 + \text{O}_2 \rightarrow 2\text{H}_2\text{O}$  (1)

**Total: 2 marks**

---

### Q9. Moles and Avogadro

(a) One mole contains  **$6.02 \times 10^{23}$  particles** (atoms/molecules/ions) (1)

(b) Atoms in one mole of carbon =  $6.02 \times 10^{23}$  (1)

**Total: 2 marks**

---

### Q10. Reacting masses

(a) Balanced:  $2\text{H}_2 + \text{O}_2 \rightarrow 2\text{H}_2\text{O}$  (1)

(b) Mass of water:

- $2 \text{ mol H}_2 \rightarrow 18 \text{ g H}_2\text{O}$
- $4 \text{ g H}_2 \rightarrow 4 \times 18 \div 4 = \mathbf{36 \text{ g}}$ ? Wait carefully.

Step-by-step:

- Moles  $\text{H}_2$ :  $4 \div 2 = 2 \text{ mol H}_2$  (check:  $\text{H} = 1$ , so  $\text{H}_2 = 2 \text{ g/mol} \rightarrow 4 \text{ g} \div 2 \text{ g/mol} = 2 \text{ mol H}_2$ )  

- Mole ratio  $\text{H}_2 : \text{H}_2\text{O} = 2 : 2 \rightarrow 2 \text{ mol H}_2$  produces  $2 \text{ mol H}_2\text{O}$
- Mass  $\text{H}_2\text{O} = 2 \text{ mol} \times 18 \text{ g/mol} = \mathbf{36 \text{ g}}$  

**Total: 3 marks**

---

### Q11. Limiting reactants

(a) Limiting reactant = substance completely used up first in a reaction (1)

(b) Important because it **determines how much product is made** (1)

**Total: 4 marks**

---

### Q12. Concentration

(a) Concentration = mass  $\div$  volume ( $\text{g/dm}^3$ ) (1)

(b) Concentration =  $10 \div 0.2 = \mathbf{50 \text{ g/dm}^3}$  (1)

**Total: 3 marks**

---

### Q13. Percentage yield

(a) % yield = (actual  $\div$  theoretical)  $\times$  100 (1)

(b) % yield =  $15 \div 20 \times 100 = 75\%$  (1)

**Total: 4 marks**

---

### Q14. Atom economy

(a) Atom economy = (Mr of desired product  $\div$  Mr of all products)  $\times$  100 (1)

(b) High atom economy  $\rightarrow$  **less waste, more sustainable, cost effective** (1)

**Total: 3 marks**

---

### Q15. Balanced equations

(a) Importance:

- To obey the law of conservation of mass (1)
- To ensure correct stoichiometric ratios for reacting substances (1)

(b) Balanced:  $4\text{Al} + 3\text{O}_2 \rightarrow 2\text{Al}_2\text{O}_3$  (1)

**Total: 3 marks**

### Q17. Relative formula masses

(a)  $\text{Ca}(\text{OH})_2$ :

- $\text{Mr} = 40 + (16 + 1) \times 2 = 40 + 34 = 74$  (2)

(b)  $\text{Al}_2\text{O}_3$ :

- $\text{Mr} = (27 \times 2) + (16 \times 3) = 54 + 48 = 102$  (2)

**Total: 4 marks**

---

### Q18. Number of moles

(a) Moles = mass  $\div$  Mr (1)

(b) Moles  $\text{CO}_2 = 11 \div 44 = 0.25$  mol (2)

**Total: 3 marks**

### Q19. Magnesium oxide

(a) Balanced:  $2\text{Mg} + \text{O}_2 \rightarrow 2\text{MgO}$

- Mr Mg = 24, Mr O = 16  $\rightarrow$  MgO = 24 + 16 = 40 g/mol
- Moles Mg =  $12 \div 24 = 0.5$  mol
- Moles MgO = 0.5 mol  $\rightarrow$  mass MgO =  $0.5 \times 40 = 20$  g (3)

(b) Mass increases because **oxygen from air combines with magnesium to form MgO**  
(2)

**Total: 5 marks**

---

### Q20. Calcium carbonate decomposition

(a) Mass decreases: **CO<sub>2</sub> gas escapes** (1)

- Only solid CaO remains (1)

(b) Mass CaO =  $50 \times (56 \div 100) = 28$  g (3)

**Total: 5 marks**

---

### Q21. Balanced equations

(a)  $2\text{HCl} + \text{Ca}(\text{OH})_2 \rightarrow \text{CaCl}_2 + 2\text{H}_2\text{O}$  (1)

(b) Equations must be balanced to **obey the law of conservation of mass** and **show correct mole ratios** (2)

**Total: 3 marks**

---

### Q22. Limiting reactants

(a) Limiting reactant: **substance completely used up first in a reaction** (1)

(b) Important because it **determines the maximum amount of product formed** (1)

**Total: 4 marks**

---

### Q23. Titration

(a)  $\text{HCl} + \text{NaOH} \rightarrow \text{NaCl} + \text{H}_2\text{O}$  (balanced 1:1) (2)

(b) Apparatus: **burette** (1)

**Total: 3 marks**

---

### Q24. Concentration

(a) Concentration = moles  $\div$  volume (in  $\text{dm}^3$ ) (1)

(b) Moles = 0.5 mol, volume =  $250 \text{ cm}^3 = 0.25 \text{ dm}^3 \rightarrow$  concentration =  $0.5 \div 0.25 = 2 \text{ mol/dm}^3$  (2)

**Total: 3 marks**

---

### Q25. Potassium hydroxide solution

(a) Moles KOH =  $28 \div 56 = 0.5 \text{ mol}$ , Volume =  $500 \text{ cm}^3 = 0.5 \text{ dm}^3 \rightarrow$  Concentration =  $0.5 \div 0.5 = 1 \text{ mol/dm}^3$  (3)

(b) Safety precaution: **Wear gloves and eye protection** (1)

**Total: 4 marks**

---

### Q26. Percentage yield

(a) % yield = (actual  $\div$  theoretical)  $\times 100$  (2)

(b) % yield =  $48 \div 60 \times 100 = 80\%$  (2)

**Total: 4 marks**

---

### Q27. Atom economy

(a) Atom economy = (Mr desired  $\div$  Mr all products)  $\times 100$  (1)

(b) Atom economy =  $40 \div 100 \times 100 = 40\%$  (2)

(c) High atom economy  $\rightarrow$  **less waste, more sustainable, cost effective** (2)

**Total: 5 marks**

---

### Q28. Moles from concentration

(a) Volume =  $25 \text{ cm}^3 = 0.025 \text{ dm}^3$   
Moles HCl =  $2.0 \times 0.025 = \mathbf{0.05 \text{ mol}}$  (2)

(b) Conversion:  $25 \text{ cm}^3 \div 1000 = \mathbf{0.025 \text{ dm}^3}$  (1)  
**Total: 3 marks**

---

### Q29. Titration with indicator

(a) Balanced:  $\text{H}_2\text{SO}_4 + 2\text{NaOH} \rightarrow \text{Na}_2\text{SO}_4 + 2\text{H}_2\text{O}$  (2)

(b) Indicator shows **end-point of neutralisation** (2)  
**Total: 4 marks**

---

### Q30. Gas volumes

(a) 1 mole of gas = **24 dm<sup>3</sup> at rtp** (1)

(b) Volume =  $0.25 \times 24 = \mathbf{6 \text{ dm}^3}$  (2)  
**Total: 3 marks**

---

### Q31. Electrolysis of water

(a)  $2\text{H}_2\text{O} \rightarrow 2\text{H}_2 + \text{O}_2$

- $\text{H}_2 : \text{O}_2 = 2 : 1 \rightarrow V \text{ O}_2 = 120 \div 2 = \mathbf{60 \text{ cm}^3}$  (3)

(b) Volume ratio is halved because **oxygen produced is half the volume of hydrogen** (2)  
**Total: 5 marks**

---

### Q32. Haber process

(a) 1 mol  $\text{N}_2$  produces 2 mol  $\text{NH}_3$  (1)

(b) Mass  $\text{NH}_3 = 2 \text{ mol} \times (14 \times 1 + 1 \times 3) = 2 \times 17 = \mathbf{34 \text{ g}}$   
Check: Mass  $\text{N}_2 = 28 \text{ g} \rightarrow 2 \text{ mol H}_2$ ? Wait:  $1 \text{ mol N}_2 \rightarrow 2 \text{ mol NH}_3 = 2 \times 17 = 34 \text{ g}$  ✓ (3)  
**Total: 4 marks**

---

### Q33. Solution moles

(a) Moles =  $0.2 \times 0.5 = 0.1 \text{ mol}$  (3)

(b) Convert  $500 \text{ cm}^3 \rightarrow 0.5 \text{ dm}^3$  (1)

**Total: 4 marks**

---

### Q34. Poor yields

(a) Reasons: **side reactions, incomplete reactions** (2)

(b) Improving yield  $\rightarrow$  **more product, less waste, cost effective** (2)

**Total: 4 marks**

---

### Q35. Industrial processes

(a) Both % yield and atom economy important  $\rightarrow$  **efficiency, cost, sustainability** (4)

(b) Low atom economy may be used if **process is faster, cheaper, or product in demand** (2)

**Total: 6 marks**

---

### Q36. Measuring hydrogen gas

Planning an experiment (6 marks):

- **Apparatus:** Conical flask, delivery tube, gas syringe, balance, clamp stand (1)
- **Method:** React magnesium ribbon with excess HCl in conical flask, connect flask to gas syringe to collect gas (2)
- **Measurements:** Measure volume of gas in gas syringe at set intervals; ensure no gas escapes; repeat for accuracy (3)

**Total: 6 marks**

### Q36. Magnesium and hydrochloric acid

(a) Mg reacts with HCl because:

- Magnesium **displaces hydrogen from the acid** (metal + acid  $\rightarrow$  salt + hydrogen)
- Produces **magnesium chloride and H<sub>2</sub> gas** (3)

(b) Moles  $\text{H}_2 = 1.12 \div 24 = 0.0467 \text{ mol}$

Moles  $\text{Mg} = \text{moles } \text{H}_2 = 0.0467 \text{ mol}$

Mass  $\text{Mg} = 0.0467 \times 24 = \mathbf{1.12 \text{ g}}$  (3)

**Total: 6 marks**

---

### Q37. Calcium carbonate and hydrochloric acid

(a) Mass  $\text{CaCO}_3 = 11.2 \times (100 \div 44) = \mathbf{25.45 \text{ g}}$  (3)

(b) Gas syringe measures volume **directly and accurately** without gas loss; allows repeatable readings (2)

**Total: 5 marks**

---

### Q38. Sodium hydroxide

(a) Moles = mass  $\div$  Mr (1)

(b) Moles  $\text{NaOH} = 80 \div 40 = \mathbf{2 \text{ mol}}$  (2)

(c) Safety precaution: **Wear gloves/eye protection** (1)

**Total: 4 marks**

---

### Q39. Concentration

(b)  $250 \text{ cm}^3 = 0.250 \text{ dm}^3$  (1)

(a) Concentration = moles  $\div$  volume =  $0.5 \div 0.25 = \mathbf{2 \text{ mol/dm}^3}$  (3)

**Total: 4 marks**

---

### Q40. Gas volumes

(a) Volume =  $0.2 \times 24 = \mathbf{4.8 \text{ L}}$  (2)

(b) Gas syringe gives **accurate measurement, reduces gas loss**, easy to read (2)

**Total: 4 marks**

---

### Q41. Magnesium sulfate

(a)  $\text{Mg} + \text{H}_2\text{SO}_4 \rightarrow \text{MgSO}_4 + \text{H}_2$

Moles  $\text{Mg} = 24 \div 24 = 1 \text{ mol}$

$$\text{Mr MgSO}_4 = 24 + 32 + (16 \times 4) = 120 \text{ g/mol}$$

$$\text{Mass MgSO}_4 = 1 \times 120 = \mathbf{120 \text{ g}} \text{ (3)}$$

(b) Hydrogen is produced because **Mg reacts with acid to displace H<sup>+</sup> ions** (2)

**Total: 5 marks**

---

### Q42. Percentage yield

(a) % yield = (actual  $\div$  theoretical)  $\times$  100 (2)

(b) % yield =  $40 \div 50 \times 100 = \mathbf{80\%}$  (2)

(c) Yield < 100% due to **side reactions, incomplete reaction, or loss during handling** (2)

**Total: 6 marks**

---

### Q43. Atom economy

(a) Atom economy = (Mr desired  $\div$  Mr all products)  $\times$  100 (2)

(b) Atom economy =  $40 \div 100 \times 100 = \mathbf{40\%}$  (2)

(c) High atom economy  $\rightarrow$  **less waste, cheaper, more sustainable** (2)

**Total: 6 marks**

---

### Q44. Hydrogen and oxygen in water

(c) Ratio 2:1 because **water contains 2 H atoms for every O atom in its molecule** (2)

**Total: 5 marks**

---

### Q45. Aluminium oxide

$$\text{Moles Al} = 54 \div 27 = 2 \text{ mol}$$

$$\text{Moles Al}_2\text{O}_3 = 2 \div 2 \times 2 = 2 \text{ mol}$$

$$\text{Mr Al}_2\text{O}_3 = 102 \text{ g/mol} \rightarrow \text{mass} = 2 \times 102 = \mathbf{204 \text{ g}} \text{ (3)}$$

(b) Balancing ensures **law of conservation of mass and correct mole ratios** (2)

**Total: 5 marks**

### Q46. Preparing HCl solution

(a)  $0.25 \text{ mol} \div 0.500 \text{ dm}^3 = 0.5 \text{ mol/dm}^3$  (3)

(b) Volumetric flask ensures **accurate total volume, precise concentration** (2)

**Total: 5 marks**

---

### Q47. Limiting reactants

(a) Limiting reactant = **reactant used up first** (2)

(b) Knowing it allows calculation of **maximum product mass possible** (3)

**Total: 5 marks**

---

### Q48. Gas syringe

(a) Gas syringe collects gas; **volume read directly**, prevents escape (2)

(b) Volume =  $0.1 \times 24 = 2.4 \text{ L}$  (3)

**Total: 5 marks**

---

### Q49. Copper(II) oxide and sulfuric acid

(a)  $\text{CuO} + \text{H}_2\text{SO}_4 \rightarrow \text{CuSO}_4 + \text{H}_2\text{O}$  (2)

(b) Reaction produces  $\text{CuSO}_4$  and  $\text{H}_2\text{O}$  because **CuO reacts with acid to form salt + water** (2)

(c) Mass  $\text{CuSO}_4$ :

Mr  $\text{CuO} = 63.5 + 16 = 79.5 \text{ g/mol} \rightarrow \text{moles} = 80 \div 79.5 \approx 1 \text{ mol}$

Mr  $\text{CuSO}_4 = 63.5 + 32 + (16 \times 4) = 159.5 \text{ g/mol} \rightarrow \text{mass} = 1 \times 159.5 \approx 160 \text{ g}$  (3)

**Total: 7 marks**

---

### Q50. Experiment to measure hydrogen gas

**Planning** (6 marks):

- **Apparatus:** Conical flask, delivery tube, gas syringe, balance, clamp stand (1)

EveryTuition Revision- [etrevision.co.uk](http://etrevision.co.uk)

Connect With A Tutor: [everytuition.org](http://everytuition.org)

- **Method:** Add magnesium to HCl in conical flask; connect to gas syringe to collect H<sub>2</sub> (2)
- **Measurements:** Measure volume of gas in gas syringe over time; ensure **no leaks**, repeat readings for accuracy (3)

**Total: 6 marks**
